Chapter 1. Introduction

This document contains a dependency analysis showing the current state and target for Cloud Native for Java (CN4J) platforms like [Jakarta EE](#) and [MicroProfile](#). The analysis tool to generate the actual state analysis is [jQAssistant](#) (see [this repository](#)), where the to-be analysis is derived from manually.

This document uses PlantUML diagrams, that are converted to SVG images - so text based search can be used in source and target files.
